

ABOUT US

Who we are

For us, the transition towards sustainable energy is a matter of the heart.

With over 100 members in northern Hessen, the Kompetenzwerk dezentrale Energietechnologien (Decentralised Energy Technologies Competence Network) e. V. is a regional corporate and energy network for renewable energies and energy efficiency. We pool together know-how, expertise, and a great deal of blood, sweat and tears for the transition towards sustainable energy. It is our goal to develop the region into an internationally-recognized location in the field of future energy provision and efficiency.

Sustainable projects and concepts are developed with and for the region in order to increase regional added value, to increase competitiveness, to create jobs with a purpose and, of course, to create a higher quality of life. These are carried out in cooperation with communities, as well as representatives from the economy, research and local renewable energy projects that are carried out by citizens. deENet was founded in 2003 and, since 2016, the association has been working under the umbrella of northern Hessen's Regional Management.

What we do

- Develop and manage innovative projects
- Advise on subsidy programmes and provide support in acquiring funding
- Manage clusters, cooperations and networks
- Share information and knowledge on using renewable energies and how to improve efficiency
- Promote start-ups and develop new business models
- Manage and present events
- Advise communities, companies and energy cooperatives on issues of climate protection, sustainable energy provision and future-viable mobility

Our Activities

- Acting as a source of incentive and ideas for northern Hessen's regional transition towards sustainable energy
- Initiating pilot projects for decentralized energy provision
- Developing and implementing flagship projects and suitable measures
- Cooperation management both within and between clusters
- Putting on specialist presentations and events
- Promoting sustainable regional development and industry dialogue
- Contributing to regional, national and international network projects and initiatives concerning the decentralized development of renewable energies
